Spill Trailers

Do you have a large assortment of spill response equipment that you need to get to a spill site quickly? Emergency Spill Response Trailers are highly mobile spill response units used by industry, mining and emergency services to provide peace of mind at locations & worksites where potential for large spillage occurs.

Ranging in size, design and style, spill trailers can respond rapidly with the right equipment to oil, fuel or chemical spills of 1000 to 20000 litres.

Starting with a base model, each spill trailer is customised to suit your specific requirements, location and environment. Trailers can be stocked with a range of absorbents, clean up equipment and PPE to cater for different spill types and sizes. Combination trailers are commonly supplied where either an oil or chemical spill could occur, or where the spilt liquid is unknown. In these applications, absorbents are colour coded for ease of identification. Our experienced team can design and offer suggestions on a range of options that best suit your requirements.

Technical

Spills on land

- Absorbent booms
- Absorbent pads, pillows & rolls
- Ground and floor absorbents
- Neutralisers

PPE

- Chemically resistant gloves
- Coveralls and overalls
